

Sujal Dyavanapelli

DevOps — Platform Engineer
in LinkedIn —  GitHub —  Medium

Profile Summary

Versatile Cloud and DevOps Engineer with hands-on experience in building, automating, and securing cloud-native infrastructure. Proficient in leveraging DevOps practices to drive efficient software delivery while embedding security and compliance across the development lifecycle. Experienced in cloud optimization, cost efficiency, and disaster recovery planning. Skilled in collaborating with cross-functional teams to design scalable, high-performance systems with a strong focus on automation, reliability, and governance.

Education

Thakur College of Engineering and Technology May 2026
Bachelor of Technology in Computer Science and Engineering Specialization: Cybersecurity — CGPA: 9.15

Skills

Programming & Automation: Python (FastAPI), Bash, Terraform

Cloud & Platform Engineering: AWS, GCP, Kubernetes (GKE, EKS), Docker, Helm, ArgoCD, GitHub Actions, GitOps, Infrastructure as Code (IaC), Blue-Green Deployments, Disaster Recovery Strategies, Containerized Microservices

Event-Driven & Distributed Systems: KEDA, Celery, Event-Driven Workloads, GPU Scheduling on Kubernetes

Observability & Reliability: Application Performance Monitoring (NewRelic, CubeAPM), Infrastructure Monitoring, Observability Tools (CubeAPM, NewRelic)

Network & Cloud Security: Linux, Network Hardening, VPC Security, Security Groups, NACLs, Load Balancing, DNS

Work Experience

Marvin, Remote Jan 2026 – Present
DevOps Engineer

- Collaborated with engineering teams to **migrate and modernize services onto Kubernetes** using **GitOps practices**, designing reusable deployment workflows that reduced onboarding time for new services by **60%** while improving scalability, deployment consistency, and disaster recovery readiness.
- Integrated and optimized **KEDA-based event-driven autoscaling** for asynchronous and queue-based workloads, enabling efficient resource utilization and dynamic scaling under variable traffic patterns.
- Deployed and managed **observability and monitoring solutions** for infrastructure and applications, improving operational visibility, incident detection, and performance troubleshooting.
- Conducted a **proof of concept (PoC)** for **GPU workload orchestration** using the **NVIDIA DRA Driver** on Kubernetes, evaluating dynamic GPU resource allocation and scheduling strategies for AI/ML workloads.
- Developed reusable **Helm chart templates** and automated CI/CD workflows using **GitHub Actions**, standardizing deployments and accelerating application delivery across Kubernetes environments.

Fixerra, Remote June 2025 – Present
DevSecOps Engineer

- Achieved **56% AWS cost optimization** by restructuring compute resources, optimizing storage lifecycles, and eliminating redundant workloads identified during infrastructure assessment.
- Supported **ISO audit certification** by strengthening cloud security posture, enforcing governance controls, and ensuring compliance with organizational and regulatory standards.
- Built and automated **data analysis ETL pipelines** using **AWS Glue (Spark)**, **Lambda**, **Athena**, **S3**, and **FastAPI**, enabling high-throughput data ingestion and analytics workflows.

- **Optimized cloud workloads** to enhance performance, reliability, and cost efficiency while resolving operational issues across multi-service AWS environments.
- Designed and implemented **Disaster Recovery (DR) strategies** to ensure system resilience, failover readiness, and business continuity.

Flexiloans, Mumbai, IN

Nov 2024–Mar 2025

Infosec Consultant Intern

- Led and executed 5+ **cloud TPRM assessments**, identifying critical vendor risks aligned with compliance standards
- Supported **incident response engineering** through detailed root-cause investigations and incident workflow documentation
- Evaluated and conducted POCs for enterprise-grade **DLP solutions**, contributing to improved data protection strategies

IIT Bombay Trust Lab, Mumbai, IN

Sept 2024–Oct 2024

SOC Analyst Intern

- Customized and deployed **Wazuh SIEM** to ingest and correlate logs for real-time phishing detection
- Developed actionable **security dashboards** for phishing attack visibility and alerting
- Collaborated with academic leadership to architect an **open-source SOC lab**, integrating multiple detection and response tools

Project Work

- **OpsMemory – AI-Powered Engineering Memory Platform**
 - Engineered an AI memory platform using **Python, FastAPI, Cognee, PostgreSQL (pgvector)**, and **Kuzu**, enabling AI agents to continuously learn from war room meetings, incidents, runbooks, engineering documentation, .
 - Built a hybrid **vector + knowledge graph retrieval** engine that transforms incident evidence into persistent organizational memory, auto-generates living incident documentation, captures operational lessons, and provides cited, context-aware responses for future troubleshooting.
- **Automated Serverless Incident Response Workflow on AWS**
 - Built a serverless incident response pipeline using **GuardDuty, EventBridge, SNS, and Lambda (Python)**.
 - Simulated **IAM credential compromise** scenarios and automated remediation using infrastructure as code.
 - Achieved an average containment time of under **10 minutes**, reducing manual triage efforts.
- **Real-Time Cloud Security Posture Management (CSPM) System**
 - Designed and implemented a comprehensive CSPM solution using **AWS Lambda, EventBridge, SQS, and MongoDB** for real-time S3 bucket security monitoring and compliance assessment.
 - Integrated **Open Policy Agent (OPA)** for Policy-as-Code enforcement, automatically evaluating S3 bucket configurations against security policies and generating risk assessments.
 - Developed automated security auditing pipeline that captures S3 events, analyzes bucket configurations (encryption, ACLs, public access), and stores findings in MongoDB with real-time dashboard visualization using **React** and **Flask**.
 - Implemented serverless architecture with **Python** Lambda functions, ensuring scalable security monitoring.
 - Created modular **Terraform** infrastructure-as-code templates, enabling seamless deployment and integration into existing AWS environments with minimal configuration overhead and standardized resource provisioning

Achievements

Top 5 Finalist – Smart India Hackathon 2023
